

Akshay Venugopal — Selected Projects

Software Engineer, 10 years fullstack · akshayvenugopal007@gmail.com · +91 94465 14810

Simpl

PRODUCT · PAYMENTS

Worked with the payments team to enable all payment methods for Simpl. Brought in novel ideas for payment methods and flows for higher conversion, ease of use and low overhead while not compromising on security. On the forefront was a novel experimentation framework developed in-house.

Technology/Tools: Svelte, Vite, React, Payment Request API, Go, NodeJS, TypeScript

Zenyum

SERVICE ARCHITECTURE

Zenyum specializes in dental cosmetics with customers all over South Asia. Solutions range from apps to websites and other services, from pre-sales to after-sales to customer experience, providing solutions for all.

Technology/Tools: Angular 8, React PWA, NodeJS, WebRTC

Gray-Matter

FRONTEND DESIGN

Gray Matter Analytics provides breakthrough evidence-based insights that ensure healthcare organizations are predicting reimbursements while simultaneously managing costs and improving the quality of care, using custom dashboards for healthcare organizations in the fold.

Technology/Tools: AngularJS, Angular 7, D3, HTML, SCSS

Cloud Manifold

SERVICE ARCHITECTURE

Mobile app/control and desktop app panel for monitoring the health of HVAC (Heating, Ventilation and Air Conditioning). An admin management system to create projects in worksites for customers and help manage equipment and its locations.

Technology/Tools: Angular 5, Bootstrap, HTML, Electron, SCSS

Tabiko

FULL STACK

Tabiko's chat assistant service connects you with real guides who can answer any questions about travel in Japan. From creating customized travel plans to assisting with reservations, flights and restaurant tables — the tools have you covered.

Technology/Tools: AngularJS, Ionic, NodeJS, Stripe Payment, Firebase

BP Kiosk

IOT · MOBILE

Cardinal Pointe Communications, Inc. (CPC) provides a platform that gives consumers the ability to operate the kiosk and manage their personal health test results from a Bluetooth-enabled smartphone device through an app.

Technology/Tools: Angular 5, Bootstrap, HTML, Angular Google Maps, SCSS

Safety Check

WEB APP

A web based application which provides an efficient way to conduct safety briefings at work sites, identify hazards and have them signed off by the right authority. It also records all briefings for later reference.

Technology/Tools: Angular 4, Angular Forms, Bootstrap, D3, HTML, CSS

Al-Ameen

CROSS-PLATFORM

An Incident Reporting System, part of Dubai Police's e-governance initiative — helping civilians reach out to the police the moment a crime or an accident happens, with applications supporting iOS, Android and Web.

Technology/Tools: Angular 4, Bootstrap, D3, HTML, CSS

Cheers Events

FRONTEND

An event management app used to create customized proposals for each client, and to manage items for the event through the application, including billing.

Technology/Tools: React JS, Redux, JavaScript

Earthquake Simulator

CONTROLS ENGINEERING

A tracking control system for a one-dimensional earthquake simulator that recreates actual earthquakes on a scale model, using a tracking control system that tracks high-frequency changes with minimum error via a PID controller.

Technology/Tools: Raspberry Pi, PID Control, C, Python

Obstacle Avoiding Robot

ROBOTICS

An obstacle-avoidance robotic vehicle built using ultrasonic sensors for its movement.

Technology/Tools: Arduino UNO, Proximity Sensor, Ultrasonic Sensor, Relays, Servo Motors
